使用 HAIMER 翰默 动平衡机的十大理由

Top 10 reasons to use HAIMER balancing technology

1

更高的转速

加工时的振动声音大通常是您无法提高刀具转速的原因。动平衡后的刀具系统允许您提高 10–15% 以上的转速，并且振动的声音和刀具的寿命不会恶化。

2

延长刀具的寿命

动平衡的刀具（整体式圆柄刀具、刀片和砂轮）的寿命平均可以延长 20% 以上。取决于不平衡量的大小，刀具的寿命可能会提升更多。

3

稳定的刀具性能

振动的消除将大幅度地减少振纹和崩刃的现象，从而稳定刀具的性能，使高速加工成为可能。

4

延长主轴的寿命

不平衡的刀具系统将产生很大的离心力，从而损坏主轴的轴承。这些损伤降低了主轴的寿命，并且导致昂贵的非计划停机。

5

更好的工件表面质量

不平衡将产生过大的振动，并导致工件表面出现振纹和质量下降，为了获得更好的工件表面质量，请对整个刀具系统做动平衡。

6

提高精度

在高转速下，不平衡将导致刀具径跳误差比静态下的测量值更大。如果不做平衡，结果只能降低转速，导致生产率和精度的下降。

7

减少换刀次数

当刀具寿命提高 20%–100% 时，换刀次数就减少了。这意味着减少刀具室的换刀时间和数控机床的调试时间。

8

精确的测量

坚固的矿物质床身，离心力感应测量器，和数控机床夹刀方式相同的专利主轴，简单可靠的校准过程。

9

应用简便

简易的软件和清晰的补偿选项（去重和配重），使动平衡的操作快速且简单。

10

工业 4.0 的成功

工业 4.0 的精髓就是收集各种信息并快速的自动交换，以优化加工流程。不做动平衡，优化后的加工流程将被迫降低速度以解决问题，从而降低了生产效率。

Faster speed and higher productivity

Vibration is often the reason higher speeds and feeds are not achieved. Balanced assemblies permit 10–15% faster spindle speeds and higher productivity without degradation of sound or tool life.

Longer tool life

On average, balanced tools (tools, inserts and grinding wheels) last 20% longer when the entire tooling assembly is balanced. Depending on the amount of unbalance, the tool life increase can be significantly greater.

Repeatable tool performance

The elimination of vibration drastically reduces problems like chatter and tool chipping, thereby stabilizing tool performance and making lights out machining possible.

Longer spindle life

Unbalance in a tool assembly creates excessive centrifugal forces that can damage spindle bearings. Such damage reduces spindle life and can lead to costly unplanned downtime.

Better surface finishes

Unbalance creates excessive vibration that can be translated to the finished part in the form of chatter and poorer finishes. To achieve the best finish, balance the full assembly.

Improved accuracy

At higher speeds, unbalance can actually induce runout during rotation where none was measured statically. Without balance, this resulted in slower speeds, less productivity and lower accuracy.

Fewer tool changes

When tool life increases 20–100%，tool changing time is reduced. This means less time is needed for tool changes in the tool room and less set up times of the machine.

Accurate process

A solid concrete base construction, centrifugal force sensors for measuring, patented spindle that clamps the tools identical to the machine tool, and a simple/reliable machine calibration process.

Ease of use

Simple software and clear compensation options (removing, adding or displacing weight) make the balancing process fast and simple for all users.

Industry 4.0 success

Industry 4.0 is all about using gathered data to automate changes on the fly that optimise the machining process. Without balance, the optimal machining logic will ultimately require a reduction of speeds until the problem is resolved, thereby reducing productivity.

智能化动平衡软件

动平衡现在变得更容易和人性化。用户界面图形显示，按钮符号代替了文字输入。通过点击鼠标或者触摸屏，使用功能键进行操作。

旧版本的界面依然被保留。无论是谁，以前使用过老的界面，现在使用新界面时也不会出现问题。

除此之外，增加了新的功能

用户管理系统设定不同的进入权限。比如，一个用户建立出新的刀具资料并确定了刀具系统的平衡精度，另一个用户只可以把存在的数据调用出来进行平衡操作。

- 用户友好界面
- 触摸屏操作（可选）
- 根据实际加工时的情况确定允许的不平衡量
- 刀具管理数据库
- 刀具数据管理文件夹
- 与其它系统可简易地进行数据交换如：刀具数据管理

更多选项

- 在不能进行不平衡补偿的地方定义禁止区域
- 对可选择区域进行计算
- 带有访问权限的用户管理
- 可连接外部电子称
- 优化测量运行
- 测量结果输出

Intelligent balancing software

Balancing is now even easier and more user-friendly. The user interface is completely made up of graphics. Buttons with symbols replace the text fields in most locations. Selection can take place using function buttons by clicking the mouse or by touching the screen.

The proven simple design of the old interface has been kept. Anyone who is already familiar with the Tool Dynamic can work with the new software without any problems.

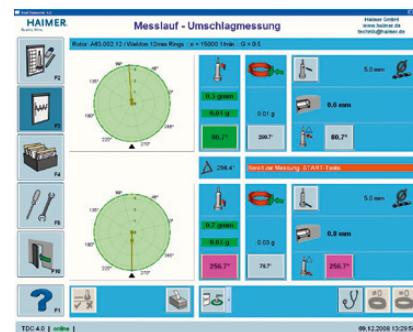

In addition, there is a series of other functions

User management makes it possible to assign different access rights. For example, one user can create new tool data and determine balance tolerances while another may only have access to be able to call up the existing data and carry out the balancing procedure.

- User-friendly design
- Operation with touchscreen (optional)
- Allocation of balance tolerances by machine type
- Tool management with database
- Tool data management in folder structure
- Simple data exchange with other systems, e. g. tool data management

Additional options

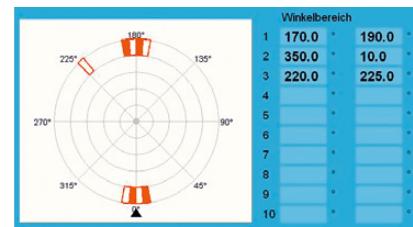

- Definition of forbidden areas where the compensation of the unbalance is not possible
- Calculation of alternative balancing positions
- User management with access rights
- Connection to external scales possible
- Optimised measuring run
- Export of measuring results

TOOL DYNAMIC TD 800

特殊的动平衡机 / SPECIAL BALANCING MACHINE

对于直径接近800mm的大型旋转件—这是您的解决方案

基于成熟动平衡技术的TD800型动平衡机允许对更大的旋转件进行测量，如轴承环，砂轮和涡轮。选用定制的夹持转换套可以让您快速方便地调节平衡。

Your solution for big rotors up to diam. 800 mm

Based on the proven Tool Dynamic balancing technology, the Tool Dynamic TD 800 allows balancing big rotors of all kind. Bearing rings, grinding wheels and turbine wheels. With hand tailored clamping adapters so you can balance your rotors as easy and quick as possible.

保护罩从中间分开，因此转子可以轻松放入，沉重的工件可以用吊装工具吊入。

The safety hood is segmented and opens to the side. The rotor is accessible from above. Heavy parts can be handled by a crane.
